## ECE 320 - Quiz \#5 - Name

555 Timers, Transistor Switch, Comparitors, Schmitt Triggers - October 1, 2020

1) 555 Timers. For the following circuit, the on and off time is equal to

$$
\begin{aligned}
& T_{\text {on }} \approx 0.6931 R_{1} C=300 \mu s \\
& T_{\text {off }} \approx 0.6931 R_{2} C=700 \mu s
\end{aligned}
$$

Determine R1, R2, and C so that the 555 timer outputs

- A 1 kHz square wave $($ Ton + Toff $=1 \mathrm{~ms})$
- With $30 \%$ duty cycle $($ Ton $=300 \mathrm{us}$, Toff $=700 \mathrm{us})$

| R1 | R2 | C |
| :--- | :--- | :--- |
|  |  |  |

2) Transistor Switch: Design. Specify R1 and R2 so that when Vin $=5.00 \mathrm{~V}$,

- Ic $=75 \mathrm{~mA}$,
- The transistor is saturated, and
- $\mathrm{Ib}<25 \mathrm{~mA}$ (the maximum output of a 555 timer)

Assume 3904 transistors

- $\quad|\mathrm{Vbe}|=0.7 \mathrm{~V}$
- $\quad \mid$ Vce $\mid=0.2 \mathrm{~V}$ when saturated
- $\beta=100$

| min value of Rb | max value of Rb | Rc |
| :---: | :---: | :---: |
|  |  |  |

3) Darlington Pair (analysis). Assume two 3904 NPN transistors are connected as a Darlington pair.

- $\quad \mid$ Vbe $\mid=0.7 \mathrm{~V}$
- $\quad \mid$ Vce $I=0.2 \mathrm{~V}$ when saturated
- $\beta=100$

4) Comparitor: Design a circuit which output

- 0 V when $\mathrm{R}<1500$ Ohms
- 10 V when $\mathrm{R}>1500$ Ohms

5) Schmitt Trigger: Design a circuit which output

- 5 V when $\mathrm{R}>1500$ Ohms
- 0V when $\mathrm{R}<1200$ Ohms
- No change for $1200<\mathrm{R}<1500$ Ohms

6) Schmitt Trigger: Analysis. Determine the voltages and resistance where the following Schmitt trigger turns on and off

| On (V2 $=+10 \mathrm{~V})$ |  | Off (V2 = 0V) |  |
| :---: | :---: | :---: | :---: |
| V 1 | R | V 1 | R |
|  |  |  |  |

Bonus! Where is the error in the geometric proof that $64=65$.

- Take an 8 x 8 square and cut it as shown on the left
- Rearrange it into the rectangle as shown on the right
- The area is now $65(64=65)$
