## ECE 320-Quiz \#4 - Name

Max/Min, Clipper, Transistors. Spring 2021

1) Max/Min: Determine the voltages and currnets for the following min/max circuit.

- Assume ideal silicon diodes ( $\mathrm{Vf}=0.7 \mathrm{~V}$ )
- $\mathrm{R}=1000+100$ * Birth Month + Birth Day. May 14th for example gives $\mathrm{R}=1514$ Ohms

| R <br> $\mathrm{R}^{1000+10^{2} \mathrm{M}+\mathrm{Day}}$ | V 1 | V 2 | V 3 | ${ }^{14}$ | ${ }^{15}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 5 1 4}$ | $\mathbf{8 . 6 7 V}$ | $\mathbf{9 . 3 7 V}$ | 8.67 V | 0.867 mA | 0.867 mA |

note: The 10k resistors are too large: the max functions can't accept the current from $R$ and all three diodes turn off (termed loading)

1) Max/Min: Determine the voltages and currnets for the following min/max circuit.

- Assume ideal silicon diodes $(\mathrm{Vf}=0.7 \mathrm{~V})$
- $\mathrm{R}=1000+100$ * Birth Month + Birth Day. May 14th for example gives $\mathrm{R}=1514$ Ohms
note: Changing the circiot so that $R$ doesn't load the circuit and it behaves like a max/min circuit.

| $\underset{\substack{\mathrm{R}}}{\text { deot }}$ | $\mathrm{V}_{1}$ | V2 | ${ }^{\text {v3 }}$ | ${ }^{14}$ | 15 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1514 | 3.30 V | 4.00 V | 6.30 V | 5.28 mA | 0 |

2) Max/Min: Determine the voltages and currnets for the following min/max circuit.

- Assume ideal silicon diodes $(\mathrm{Vf}=0.7 \mathrm{~V})$
- $\mathrm{R}=1000+100$ * Birth Month + Birth Day. May 14th for example gives $\mathrm{R}=1514$ Ohms

| R <br> $1000+100^{2} \mathrm{M}+\mathrm{Day}$ | V 1 | V 2 | V 3 | ${ }^{\mathrm{I}} 4$ | ${ }^{15}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 5 1 4}$ | 2.7 V | 5.0 V | 5.7 V | 0 | 3.3 mA |

3) Clipper: Determine $\{\mathrm{R} 0, \mathrm{R} 1, \mathrm{R} 2, \mathrm{Vz} 1, \mathrm{Vz} 2\}$ to implement the following function.

- Let R3 be $1000+100$ * your birth month + your birth day. May 14th would give $\mathrm{R}=1514$ Ohms.

| $\begin{gathered} \mathrm{R} 3 \\ 1000+100 * \mathrm{Mo}+\text { Day } \end{gathered}$ | R0 | $\mathrm{V}_{\mathrm{z} 1}$ | R1 | $\mathrm{V}_{2} 2$ | R2 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1514 | 5k | 6V | 302.8 | 9V | 36 |

4) Clipper: Design a circuit to clip the voltage at +7 V and -3 V

$$
y=\left\{\begin{array}{cc}
+7 V & x>7 \\
x & -3<x<7 \\
-3 V & x<-3
\end{array}\right.
$$

5) The VI characteristics for an NPN transistor are shown below

- Draw the load line for the following circuit
- Show on the load line the operating point (Vce, Ic) when Vin $=4 \mathrm{~V} \& 8 \mathrm{~V}$.

Assume

- $\quad$ Vbe $=0.7 \mathrm{~V}$
- $\mathrm{Vce}=0.2 \mathrm{~V}$ when saturated

| R | Load Line | Vin = 4.0V | Vin = 8.0V |
| :---: | :---: | :---: | :---: |
| $1000+100^{* M o}+$ Day |  |  |  |
| $\mathbf{1 5 1 4}$ | show on graph | show (Vce, Ic) on graph | show (Vce, Ic) on graph |

Vin $=4.0 \mathrm{~V}$

$$
I_{b}=\left(\frac{4 V-0.7 V}{1514}\right)=2.18 m A
$$

Vin $=8.0 \mathrm{~V}$

$$
I_{b}=\left(\frac{8 V-0.7 V}{1514}\right)=4.82 m A
$$

6) The voltages for the following circuit are measured (shown below). From these measurements, determine the following:

| $\frac{\mathrm{R}}{1000+100 * \mathrm{Mo}+\text { Day }}$ | $\mathrm{Ib}(\mathrm{mA})$ | Ic (mA) | Current Gain (beta) | Operating Region off / active / saturated |
| :---: | :---: | :---: | :---: | :---: |
| $1514$ | 2.85mA <br> varies with $R$ | $118.8 m A$ | $41.69$ <br> varies | active $\text { Vce }>0.2 \mathrm{~V}$ |
