## ECE 321: Handout \#14

1) Draw the small signal model for the following CE amplifier. Assume

$$
r_{f}=\left(\frac{0.026}{I_{b}}\right)=4355 \Omega
$$

2) Determine the 2-port model for this amplifier

## Solution:

Draw the small signal model (AC model)

Determine the 2-port parameters

- $\mathrm{Ai}=0$ (by inspecation)
- $\mathrm{Ri}=2 \mathrm{k}+20 \mathrm{k}$ || 100k || $4355=5453$
- Rout $=3000$ (by inspection)
- Ao: This one you have to work for

Ao: Let $\mathrm{Vin}=1 \mathrm{~V} . \mathrm{Ib}$ is then

$$
\begin{aligned}
& V_{b}=\left(\frac{20 k\|100 \mathrm{k}\| 4355}{20 k\|100 k\| 4355+2000}\right) 1 V=0.6332 \mathrm{~V} \\
& I_{b}=\frac{0.6332 \mathrm{~V}}{4355 \Omega}=145.4 \mu \mathrm{~A} \\
& 200 I_{b}=29.08 \mathrm{~mA} \\
& V_{\text {out }}=-3000 \cdot 200 I_{b}=-87.24 \mathrm{~V}
\end{aligned}
$$

The net result is then
