

ECE 376 - Test #2: Name _____

C-Programming on a PIC Processor

Open book, open notes. Calculators and Matlab permitted. Individual effort (help from other people or web sites where other people help you solve the problems not permitted).

1) C Coding & Flow Charts. Write a C program for an random count-down timer.

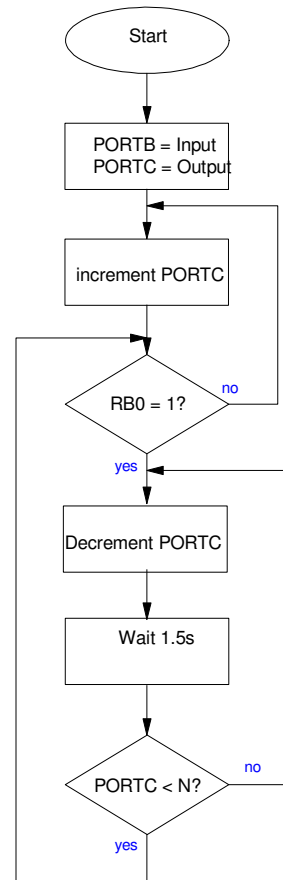

- Let N be Your Birth Date (1..31).
- When you press RB0 (PORTB pin 0), a random number (0..255) is placed in PORTC
- The counter then counts down, one count every 1.5 seconds (i.e. problem #4), until $\text{PORTC} < N$
- It then repeats, waiting for you to press RB0

Test - Do Not Post

N = _____ (birth date 1..31)

```
#include <pic18.h>
```

```
void main(void) {  
    ADCON1 = 0x0F;
```

2) Battle Bots! Write a C program to control a battle bot.

- A stepper motor is connected to PORTC (left motor) and PORTD (right motor)
- The motor spins forward when PORTX goes through the sequence { 1, 2, 4, 8, repeat }
- The motor spins in reverse when PORTX goes through the sequence { 8, 4, 2, 1, repeat }

PORTB controls the motor (10ms/step when the motor is spinning)

Button	none	RB3 forward	RB2 turn left	RB1 turn right	RB0 reverse
Left Motor (PORTC)	stop	forward 1-2-4-8	reverse 8-4-2-1	forward 1-2-4-8	reverse 8-4-2-1
Right Motor (PORTD)	stop	forward 1-2-4-8	forward 1-2-4-8	reverse 8-4-2-1	reverse 8-4-2-1

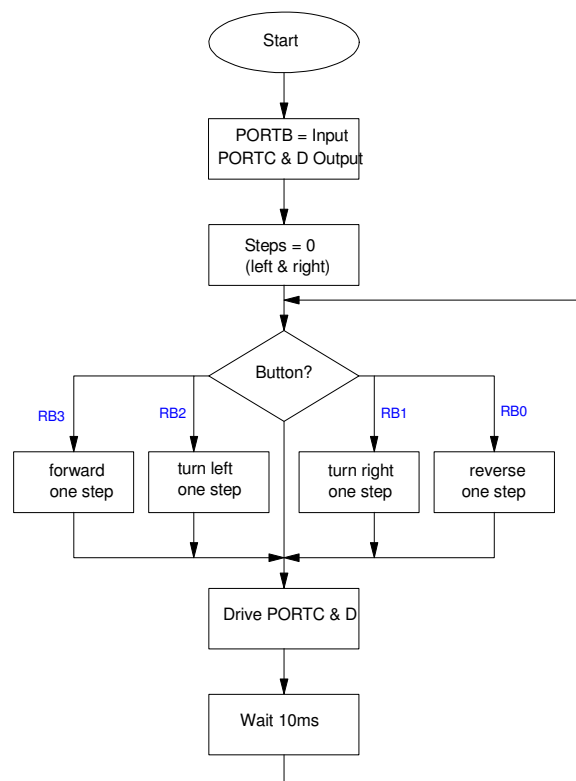

Write the corresponding C code

**Test - Do Not
Post**

```
unsigned char TABLE[4] = {1, 2, 4, 8};
```

```
void main(void) {  
    ADCON1 = 0x0F;  
}
```

Analog Inputs

3) Assume the A/D input to a PIC processor has the following hardware connection where R_T is a 3k thermistor where T is the temperature in degrees C

$$R_T = 3000 \cdot \exp\left(\frac{3200}{T+273} - \frac{3200}{298}\right) \Omega$$

Let R be a resistor

$$R = 1000 + 100 \cdot (\text{your birth month}) + (\text{your birth date}).$$

For example, May 14th would result in R = 1514 Ohms

If the A/D reading is 372, determine

Test - Do Not Post

- The voltage at V1
- The temperature in degrees C, and
- How much the temperature would have to change for the PIC to detect that change

R 1000 + 100*mo + day	A/D Reading	V1 volts	Temperature degrees C
	372		

chi-squared test

4) (10pt). A 5-sided die is rolled 33 times. The results are

1	2	3	4	5
8	9	7	6	13

Use a chi-squared test to determine the probability that this is a fair die (all numbers have equal probability)

Test - Do Not Post

Chi-Squared Table

Probability of rejecting the null hypothesis

dof	99.5%	99%	97.5%	95%	90%	10%	5%	2.5%	1%	0.5%
1	7.88	6.64	5.02	3.84	2.71	0.02	0	0	0	0
2	10.6	9.21	7.38	5.99	4.61	0.21	0.1	0.05	0.02	0.01

5	16.75	15.09	12.83	11.07	9.24	1.61	1.15	0.83	0.55	0.41

t-Tests

5) (15pt) Through week #5, the opponents of the Minnesota Vikings have scored:

- { 27, 34, 17, 14, 17 } points
- mean = 21.800 points per game
- standard deviation = 8.408 points per game

a) Use a t-test to determine how many points the Vikings have to score on offense to be 99% certain of winning the game?

b) Assume the Vikings score 34 points in game #6. What is the chance they will win that game?
