## ECE 376 - Homework \#6

Data Collection \& Chi-squared Test.

## Data Collection

1) Measure one of the following with at least two data sets and 20+ data points per run:

- The voltage across a capacitor as it discharges
- The temperature of a cup (or can) of hot water as it cools off
- The temperature of a can of cold water as it warms up
- Other

Plot the resulting data vs. time.

2) Come up with an exponential curve fit for your data in the form of

$$
V=a \cdot \exp (b t)
$$

or

$$
\ln (V)=b t+\ln (a)
$$

in Matlab
$\gg t=[1: \text { length }(V)]^{\prime} * 0.01 ;$
$\gg$ plot (t,V)
>> xlabel('Time (seconds)');
>> Ylabel ('Volts');
$\gg B=[t, t . \wedge 0]$;
$\gg Y=\log (V) ;$
$\gg A=\operatorname{inv}\left(B^{\prime} * B\right) * B^{\prime} * Y$
$A=$
$-0.2001$
1.6404
$\gg \mathrm{b}=\mathrm{A}(1)$;
$\gg a=\exp (A(2))$
$a=$
5.1573
$\gg \operatorname{plot}\left(t, V, b^{\prime}, t, a^{*} \exp (b * t),^{\prime} r^{\prime}\right)$

3) Use a chi-squared test to determine if your data has an exponential distribution

- Split the data into N bins ( N different times)
- Count the number of data points in each bin
- Compare to the expected frequency using a chi-squared test)

In Matlab

```
>> sum( (V>4) )
ans=105
>> sum( (V>3).* (V<4) )
ans=140
>> sum( (V>2).* (V<3) )
ans=200
>> sum( (V>1).* (V<2) )
ans=343
```

The voltage should decay as

$$
V=5 \cdot \exp (-0.2001 t)
$$

The time it takes to decay to

- $4 \mathrm{~V}: 1.115$ seconds
- $3 \mathrm{~V}: 2.554$ seconds
- 2V: 4.5815 seconds
- 1V: 8.0427 seconds

The time spent in each region divided buy the total time ( 8.0427 seconds) gives the probablility that a given data point is in that region

| Voltages | Time in Region | p | np | N | chi-squared |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $4 \mathrm{~V}-5 \mathrm{~V}$ | 1.115 sec | 0.1386 | 109.2168 | 105 | 0.1628 |
| $3 \mathrm{~V}-4 \mathrm{~V}$ | 1.439 sec | 0.1789 | 140.9732 | 140 | 0.0067 |
| $2 \mathrm{~V}-3 \mathrm{~V}$ | 2.027 sec | 0.2520 | 198.5760 | 200 | 0.0102 |
| $1 \mathrm{~V}-2 \mathrm{~V}$ | 3.461 sec | 0.4303 | 339.0764 | 343 | 0.0454 |
|  |  |  |  |  |  |

From StatTrek, a chi-squared score of 0.2251 with 3 degrees of freedom corresponds to a probability of 0.027

## There is a $\mathbf{2 . 7 \%}$ chance that this is not an exponential distribution

## Fair \& Loaded Dice

4) Determine experimentaly using a chi-squared test whether or not the following $C$ code produces a fair 6 -sided die:
```
while(1) {
    while(!RB0);
    while(RBO) DIE = (DIE + 1) % 6;
    DIE += 1;
    LCD_Move(1,0); LCD_Out(DIE, 1, 0);
    SCI_Out(DIE, 1, 0);
    SCI_CRLF();
    }
```

| bin | p | np | N | chi-squared |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | $1 / 6$ | 25.67 | 17 | 2.9264 |  |  |  |  |  |
| 2 | $1 / 6$ | 25.67 | 33 | 2.0952 |  |  |  |  |  |
| 3 | $1 / 6$ | 25.67 | 34 | 2.7056 |  |  |  |  |  |
| 4 | $1 / 6$ | 25.67 | 27 | 0.0693 |  |  |  |  |  |
| 5 | $1 / 6$ | 25.67 | 23 | 0.2771 |  |  |  |  |  |
| 6 | $1 / 6$ | 25.67 | 20 | 1.2511 |  |  |  |  |  |
|  |  |  |  |  |  |  |  | Total: | 9.3247 |

From StatTrek, with 5 degrees of freedom, this corresponds to a probability of 0.903
There is a $\mathbf{9 0 . 3 \%}$ chance that this is not a fair die

- Enter value for degrees of freedom.
- Enter a value for one, and only one, of the other textboxes.
- Click Calculate to compute a value for the remaining textbox.

| Degrees of freedom | 5 |
| :---: | :---: |
| Chi-square value (x) | 9.3247 |
| Probability: $P\left(X^{2} \leq 9.3247\right)$ | 0.903 |
| Probability: $P\left(X^{2} \geq 9.3247\right)$ | 0.097 |

5) Determine experimentaly using a chi-squared test whether or not the following $C$ code produces a fair 6 -sided die:
```
while(1) {
    while(!RBO);
    while(RB0) {
        DIE = (DIE + 1) % 6;
        X = (X + 1) % 11;
        }
    DIE = DIE + 1;
    if(X == 0) DIE = 6;
    LCD_Move(1,0); LCD_Out(DIE, 1, 0);
    SCI_Out(DIE, 1, 0);
    SCI_CRLF();
    }
```

| bin | p | np | N | chi-squared |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | $1 / 6$ | 25.6667 | 19 | 1.7316 |  |  |  |  |  |
| 2 | $1 / 6$ | 25.6667 | 25 | 0.0173 |  |  |  |  |  |
| 3 | $1 / 6$ | 25.6667 | 19 | 1.7316 |  |  |  |  |  |
| 4 | $1 / 6$ | 25.6667 | 15 | 4.4329 |  |  |  |  |  |
| 5 | $1 / 6$ | 25.6667 | 37 | 5.0043 |  |  |  |  |  |
| 6 | $1 / 6$ | 25.6667 | 39 | 6.9264 |  |  |  |  |  |
|  |  |  |  |  |  |  |  | Total: | 19.8442 |
|  |  |  |  |  |  |  |  |  |  |

Now covnvert the chi-squared score (19.844) to a probability using StatTrek
There is a $\mathbf{9 9 . 9 \%}$ chance that this is not a fair die

- Enter value for degrees of freedom.
- Enter a value for one, and only one, of the other textboxes.
- Click Calculate to compute a value for the remaining textbox

## Am I Psychic?

6) Write a C program which tests if you're psychic with a 4-sided die:

- Each round, predict which number is going to come up (0..3)
- Press the corresponding button RB0..RB3.
- When you release the button, a random number in the range of $0 . .3$ is generated
- If you were right, the PIC records that. Likewise if you were wrong.
- The LCD display displays how many times you were right and wrong.

```
// Global Variables
const unsigned char MSGO[21] = "Right " ";
// Subroutine Declarations
#include <pic18.h>
// Subroutines
#include "lcd_portd.c"
// Main Routine
void main(void)
{
:
:
    }
}
```

7) Collect data with your program.

| Correct | Incorrect |
| :---: | :---: |
| 14 | 31 |

8) Determine the chance that you were not just guessing using a chi-squared test

- Null hypothesis: you are just guessing (correct $33 \%$ of the time).

| bin | p | np | N | chi-squared |
| :---: | :---: | :---: | :---: | :---: |
| correct | $1 / 4$ | 11.25 | 14 | 0.6722 |
| incorrect | $3 / 4$ | 33.75 | 31 | 0.2241 |

From StatTrek, a chi-squared score of 0.1 corresponds to a probability of 0.65622
There is a $\mathbf{6 5 . 6 \%}$ chance that I'm not just guessing (no conclusion)

- Enter value for degrees of freedom.
- Enter a value for one, and only one, of the other textboxes.
- Click Calculate to compute a value for the remaining textbox.
