

ECE 461/661 - Test #2: Name _____

October 19, 2018

1) Give the transfer function for a system with the following response to a unit step input:

2) For the following mass-spring system:

a) Write the dynamics of this system as four coupled differential equations in terms of $\{V_{in}, V1, V2, I3, I4\}$

b) Express these dynamics in state-space form

$$\begin{bmatrix} sV1 \\ \text{---} \\ sV2 \\ \text{---} \\ sI3 \\ \text{---} \\ sI4 \end{bmatrix} = \begin{bmatrix} | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \\ | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \\ | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \\ | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \\ | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \end{bmatrix} \begin{bmatrix} V1 \\ V2 \\ I3 \\ I4 \end{bmatrix} + \begin{bmatrix} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{bmatrix} V_{in}$$

$$Y = \begin{bmatrix} | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \\ | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \\ | & | & | & | \\ \text{---} & \text{---} & \text{---} & \text{---} \end{bmatrix} \begin{bmatrix} V1 \\ V2 \\ I3 \\ I4 \end{bmatrix} + \begin{bmatrix} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{bmatrix} V_{in}$$

3) For the following block diagram, find the transfer function from X to Y

4) Sketch the root locus for

$$G(s) = \left(\frac{10}{s(s+4)(s+7)} \right)$$

Determine the following as well:

Real Axis Loci	
Breakaway Points (approx)	
jw Crossing (approx)	
Asymptotes	show on graph

5) Sketch the root locus for

$$s(s + 5)(s + 1 + j3)(s + 1 - j3) + 5k = 0$$

Determine the following as well:

Real Axis Loci	
Breakaway Points (approx)	
jw Crossing (approx)	
Departure Angle from pole at $s = -2 + j3$	
Asymptotes	show on graph

Bonus! Early voting in North Dakota Starts October 29th. What do you need to bring to the polls to vote?

2nd-Order Approximations

$$G(s) = \left(\frac{k \cdot \omega_o^2}{s^2 + 2\zeta \omega_o s + \omega_o^2} \right) = \left(\frac{k \cdot (\sigma^2 + \omega_d^2)}{(s + \sigma + j\omega_d)(s + \sigma - j\omega_d)} \right)$$

$$s = -\sigma \pm j\omega_d = \omega_o \angle \pm \theta$$

$$\zeta = \cos \theta$$

damping ratio

$$T_p = \frac{\pi}{\omega_o \sqrt{1 - \zeta^2}}$$

time to peak

$$\%OS = \exp\left(-\left(\frac{\pi \zeta}{\sqrt{1 - \zeta^2}}\right)\right)$$

% Overshoot

$$T_s = T_{2\%} = \frac{4}{\sigma}$$

2% Settling Time

$$\omega_m = \omega_o \sqrt{1 - 2\zeta^2}$$

Max gain frequency

$$M_m = \frac{1}{2\zeta \sqrt{1 - \zeta^2}}$$

Max gain

$$\frac{1}{2\zeta}$$

Gain at corner freq

ζ	T_p	%OS	ω_m	Mm	Mm (dB)
0.1	3.15	72.81	0.99	5.03	14.02
0.2	3.21	51.97	0.96	2.55	8.14
0.3	3.29	35.5	0.91	1.75	4.85
