## HP35s - RPN \& Stacks

Note: If you would like to try using an HP calculator, you can download a free app on your cell phone

- Android: Free42.

HP42s calculator (almost identical to an HP35s but out of production)

- Apple: ComplexRPN

A generic RPN calculator which does complex numbers

## Stacks

The HP35s uses makes extensive use of stacks. There are four registers in the stack

- T top of stack
- Z
- Y top row of display
- X bottom of stack and bottom row of display

When you type in a number, it goes into the X register

## push (enter)

The enter key is a "push" command. This pushes data up one on the stack. Note that the contents of T are lost.

Result of an Enter command (push)
The X register remains unchanged. If enter a number, it clears the X register and replaces it with the number your typing.
$\operatorname{Pop}(R \downarrow)$ :
Rotate modes all data down one with the X register going to the T register

Result of a rotate down command ( $R \downarrow$ )

## Swap $X$ and $Y(X \underset{\leftarrow}{\rightleftarrows})$

This just swaps the contents of the X and Y register

Result of a Swap $X$ and $Y$ command

## RPN: Reverse Polish Notation

All operations operate on the X and Y register. Likewise, you need to set up the stack before you press the + , -, *, or other functions.

| $t$ |
| :---: |
| $t$ |
| $z$ |
| $y^{* *} x$ |
| after $a *$ operation |

| $t$ |
| :---: |
| $t$ |
| $z$ |
| $y / x$ |
| after a/operation |

Note that the t-register remains unchanged. This lets you quickly find all multiples of N or products of N .
Example: Find all multiples of seven.
Solution: Push 7 onto the stack
7
Enter
Enter
Enter
Now hit the + button over and over again. This results in you adding 7 to the $X$ register over and over.

ATA

| 7 |
| :---: |
| 7 |
| 7 |
| 21 |
| second + |

| 7 |
| :---: |
| 7 |
| 7 |
| 28 |
| third + |

| 7 |
| :---: |
| 7 |
| 7 |
| 35 |
| th + |

Example 2: Suppose you invest $\$ 1000$ at 5\% interest. How much do you have each year?
Solution: Push 1.05 (5\% interest) onto the stack. When done, input 1000 into the X register.

$$
\begin{aligned}
& 1.05 \\
& \text { Enter } \\
& \text { Enter } \\
& \text { Enter } \\
& 1000
\end{aligned}
$$

Now hit the multiply (x) button over and over

| T | 1.05 |
| :---: | :---: |
| $\mathbf{Z}$ | 1.05 |
|  | 1.05 |
|  | 1000 |
|  | before |

| 1.05 |
| :---: |
| 1.05 |
| 1.05 |
| 1102.50 |
| second x |

| 1.05 |
| :---: |
| 1.05 |
| 1.05 |
| 1157.625 |
| third x |

| 1.05 |
| :---: |
| 1.05 |
| 1.05 |
| 1215.506 |
| $4 \operatorname{th} x$ |

## Sample Problems

Problem 1. Assume $\mathrm{X}=3$. Solve for Y :

$$
Y(x)=\left(\frac{10(x+2)(x+20)}{x(x+15)}\right)
$$

Solution:

```
3
STO X
2
+
RCL X
20
+
x
10
x
RCL X
/
RCL X
```

```
15
+
/
```

answer $=21.2963$

Problem 2: Find the net resistance from A to B

Start from the right and start simplifying 300 and 350 are in series (they add) this is in parallel with 250 (they add as the sum of the inverses inverted)

```
350
Enter
300
+ x = 650 300 and 350 Ohms in series
1/X
250
1/X
+
1/X 650 || 250 = 180.5556
200
+ inseries with 200 Ohms = 380.5556
1/X
150
1/X
+
1/X in paralel with 150 Ohms = 107.5916
100
+
    in series with 100 Ohms = 207.5916
```

Answer: 207.5916 Ohms
