homework sets, and solutions.

Becoming familiar with MATLAB

- The console
- The editor
- The graphics windows
- The help menu
- Saving your data (diary)

Matlab can be used like a calculator: it adds, subtracts, multiplies, and divides

```
x = 17/3  
5.6667
```

```
y = (3+4)*5  
35
```

Some special numbers are pre-defined in Matlab

```
e = exp(1)  
2.7183
```

```
pi  
3.1416
```

```
i  
0 + 1.0000i
```

```
j  
0 + 1.0000i
```

You can choose to or not to display the results of an operation

```
x = 2*pi  
6.2832
```

```
x = 2*pi;
```

You can change how numbers are displayed

```
format short  
pi
```

```
3.1416
```

```
format long  
pi
```

```
3.141592653589793
```

```
format longe  
pi^30
```

```
8.212893304027486e+014
```

At its heart, Matlab is a matrix language: it is designed to to matrix operations.

To input a matrix, the following symbols are used

```
[ start of matrix  
] end of matrix  
, next element  
; next row
```

Example:

```
A = [1, 2, 3]  
     1     2     3
```

```
B = [1, 2, 3; 4, 5, 6]  
     1     2     3  
     4     5     6
```

```
C = A'  
     1  
     2  
     3
```

```
D = zeros(1, 3)  
     0     0     0
```

Random Numbers: Uniform distribution from (0, 1)

```
rand(2, 4)
```

```
0.8147    0.1270    0.6324    0.2785
0.9058    0.9134    0.0975    0.5469
```

Normal distrubution: N(0,1)

```
randn(2, 4)
```

```
3.5784   -1.3499    0.7254    0.7147
2.7694    3.0349   -0.0631   -0.2050
```

for loops:

```
x = zeros(1, 5);
for i=1:5
    x(i) = i*i;
end
x
```

```
x =     1         4         9        16        25
```

Example: Roll five 6-sided dice

```
>> x = [1:5]
```

```
      1      2      3      4      5
```

```
>> rand(1,5)
```

```
    0.7298    0.8908    0.9823    0.7690    0.5814
```

```
>> dice = ceil( 6*rand(1,5) )
```

```
      3      6      2      4      4
```

```
dice = ceil( 6*rand(1,5) )
```

```
      1      4      3      1      3
```

```
sum( ceil( 6*rand(1,5) ) )
```

```
      8
```

```
sum( ceil( 6*rand(1,5) ) )
```

```
    16
```

Roll 5d6 one-hundred times and record how many rolls you get for each total:

```
X = zeros(30,1);  
for i=1:100  
    D = sum( ceil( 6*rand(1,5) ) );  
    X(D) = X(D) + 1;  
end  
bar(X)  
xlabel('Die Total');  
ylabel('Frequency');  
title('100 die rolls')
```

Roll 5d6 10,000 times and record the frequency of each outcome:

```
X = zeros(30,1);  
for i=1:10000  
    D = sum( ceil( 6*rand(1,5) ) );  
    X(D) = X(D) + 1;  
end  
bar(X)
```

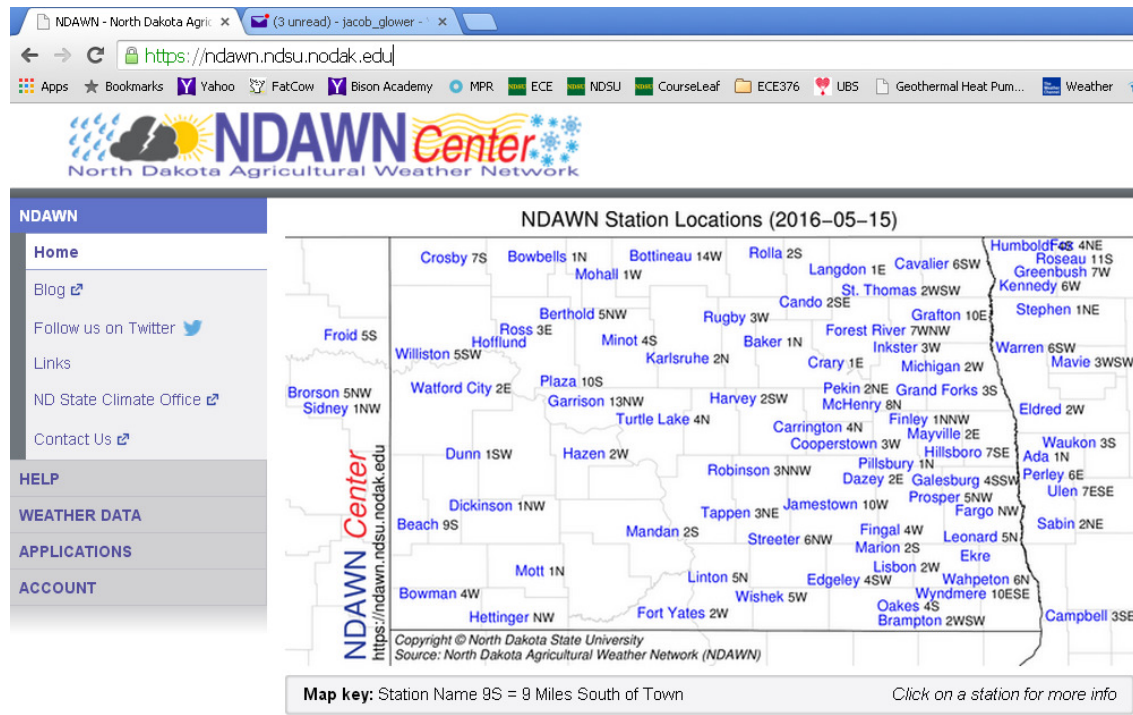

Numerical Integration:

The simplest (and least accurate) is Euler integration

$$\text{Area} = \text{Width} * \text{height}$$

Example: Determine how much energy a 1.5m² solar panel will generate in Fargo, ND over the past two weeks. Assume the efficiency of the solar panel is 20%

Solution: Get solar data from NDAWN: <https://ndawn.ndsu.nodak.edu/>

OR

Enter begin and end dates (YYYY-MM-DD):

Begin date: 2016-05-15 ...
End date: 2016-05-15 ...

[Get table](#)

Export to a CVS file and copy the data to the clip board. From Matlab

```
Sun = [  
    paste in the data  
];
```

```
h = [1:length(Sun)]';  
plot(h,Sun);
```

This is hourly data. To convert to Joules, integrate

- height = data * 1,000,000 (MJ total over an hour)
- width = 1 hour
- Area = Width * height = Joules

$$\text{MJ} = \text{sum}(\text{Sun})$$

$$\text{MJ} = 280.2130$$

To convert that to kWh

$$1\text{MJ} = 0.2778 \text{ kWh}$$

$$\text{kWh} = \text{MJ} * 0.2778$$

$$\text{kWh} = 77.8432$$

At 20% efficiency, a solar panel would generate 15.5kWh over this 2 week span. This is worth about \$1.55

Bouncing Ball

Matlab is also surprisingly good at animation. For example, simulate a bouncing ball

```
x = 0;
y = 1;

dx = 1;
dy = 0;

ddx = 0;
ddy = 0;

dt = 0.01;

for i=1:1000
    ddy = -9.8;

    dx = dx + ddx*dt;
    dy = dy + ddy*dt;

    x = x + dx*dt;
    y = y + dy*dt;

    if (x > 1)
        dx = -abs(dx);
    end
    if (x < -1)
        dx = abs(dx);
    end
    if (y < -1)
        dy = abs(dy);
    end

    hold off
    plot([-1,1],[-1,1],'.');
    hold on
    plot(x,y,'o')
    pause(0.01);
end
```

Bouncing Ball

Matlab Commands

Analysis

- `sqrt(x)` square root of x
 - `log(x)` log base e
 - `log10(x)` log base 10
 - `exp(x)` e^x
 - `exp10(x)` 10^x
 - `abs(x)` $|x|$
 - `round(x)` round to the nearest integer
 - `floor(x)` round down (integer value of x)
 - `ceil(x)` round up to the next integer
 - `real(x)` real part of a complex number
 - `imag(x)` imaginary part of a complex number
 - `abs(x)` absolute value of x, magnitude of a complex number
 - `angle(x)` angle of a complex number (answer in radians)
 - `unwrap(x)` remove the discontinuity at π (180 degrees) for a vector of angles
-

Polynomials

- `poly(x)`
- `roots(x)`
- `conv(x,y)`

Trig Functions

- `sin(x)` `sin(x)` where x is in radians
 - `cos(x)` `cos()`
 - `tan(x)` `tan()`
 - `asin(x)` `arcsin(x)`
 - `acos(x)` `arccos(x)`
 - `atan(x)` `arctan(x)`
 - `atan2(y,x)` angle to a point (x,y)
-

Probability and Statistics

- `factorial(x)` $(x-1)!$
 - `gamma(x)` $x!$
 - `rand(n,m)` create an $n \times m$ matrix of random numbers between 0 and 1
 - `randn(n,m)` create an $n \times m$ matrix of random numbers with a normal distribution
 - `sum(x)` sum the columns of x
 - `prod(x)` multiply the columns of x
 - `sort(x)` sort the columns of x from smallest to largest
 - `length(x)` return the dimensions of x
 - `mean(x)` mean (average) of the columns of x
 - `std()` standard deviation of the columns of x
-

Display Functions

- `plot(x)` plot x vs sample number
 - `plot(x,y)` plot x vs. y
 - `semilogx(x,y)` $\log(x)$ vs y
 - `semilogy(x,y)` x vs $\log(y)$
 - `loglog(x,y)` $\log(x)$ vs $\log(y)$
 - `mesh(x)` 3d plot where the height is the value at x(a,b)
 - `contour(x)` contour plot
 - `bar(x,y)` draw a bar graph
 - `xlabel('time')` label the x axis with the word 'time'
 - `ylabel()` label the y axis
 - `title()` put a title on the plot
 - `grid()` draw the grid lines
-

Useful Commands

- hold on don't erase the current graph
- hold off do erase the current graph
- diary create a text file to save whatever goes to the screen
- linspace(a, b, n) create a 1xn array starting at a, increment by b
- logspace(a,b,n) create a 1xn array starting at 10^a going to 10^b , spaced logarithmically
- subplot() create several plots on the same screen
- disp('hello') display the message *hello*

Utilities

- format set the display format
 - zeros(n,m) create an nxm matrix of zeros
 - eye(n,m) create an nxm matrix with ones on the diagonal
 - ones(n,m) create an nxm matrix of ones
 - help help using different functions
 - pause(x) pause x seconds (can be a fraction). Show the graph as well
 - clock the present time
 - etime the difference between to times
 - tic start a stopwatch
 - toc the number of seconds since tic
-
